ILLANGHKUMARAN THIRUVALLUVAN | Azure Devops/Platform Engineer

Chennai, India | +91 7402-617-608 | illangh.thiru@gmail.com | thiruvalluvanillanghkumaran.github.io

Professional Summary

Results-driven Azure Devops engineer & Platform Engineer with 6+ years of enterprise experience at Tata Consultancy Services. Specialized in cloud-agnostic distributed systems engineer, Internet Information Service (IIS), end-to-end Infrastructure automation (IaC), and high availability container orchestration (Kubernetes). Leverages an M.S in Software Engineering to resilient system architecture, reducing downtime overhead by 85%, optimizing of production cloud spends by 15% and eliminating downtime across critical workflows.

Technical Skills

- Container orchestration & Platforms: IIS, Kubernetes (AKS), Docker, App service, Virtual networks, Cluster Auto-scaling
- Infrastructure as Code & CI/CD: Terraform, Azure Devops (Pipelines, Repos), Git
- System Programming & Scripting: Powershell, Helm chart, Python (System Automation)
- Network & Traffic Engineering: Cloudflare WAF, Enterprise DNS, Venafi/Sectigo PKI
- Observability & Telemetry: Grafana, Azure Monitor, Log Analytics, Application Insights, Elastic Search
- Operating Systems: Windows Server (2012 – 2025), Linux (RHEL 7,8)

Professional Experience

Tata Consultancy Services – Azure Devops & Platform Engineer| Feb 2020 – Present | Chennai, India

- IIS Support: Created and updated configuration based on the requirements around 150+ .net sites and 18 Sitecore 10 websites infrastructure migration in OS level and Cloud level changes.
- Cloud Infrastructure Engineering: Designed and provisioned 50+ modular enterprise multi-tier cloud environments utilizing reusable, cloud-agnostic terraform blueprints, accelerating infrastructure orchestration delivery times by 75%.
- Container & Cluster Orchestration: Spearheaded the architectural migration of 15+ legacy on-premises application to managed Kubernetes clusters, Horizontal Pod Autoscaler (HPA) baselines sustaining 200% traffic spikes with zero service degradation while accelerating API response times by 20%.
- Continuous Delivery & Pipeline Design: Automated enduring end-to-end YAML-based declarative CI/CD engines for microservices architectures, compressing deployment lifecycles from 2 hours, down to 15mins (an 87.5% operational reduction).
- GitOps & Production Governance: Applied strict, pull-request-driven GitOps workflows for systemic state changes, mitigating structural configuration anomalies and runtime environment drifts by 40%.
- Security & Identity Automation: Standardized zero-trust infrastructure paradigms by engineering automated SSL/TLS public key cryptography lifecycle rotations (Venafi/Sectigo API wrappers), mitigating 100% of expiry induced systems outages.
- Traffic & Edge Engineering: Built a cross-platform integration engine unifying edge routing states between legacy F5 load balances and Cloudflare enterprise dns setups, automated away 80% of routine technical interventions.

- High Availability & SRE: Managed Multi-region cluster deployment topologies incorporated automated cross-region failover protocols, consistency meeting an enterprise-grade 99% global system availability SLA.
- Telemetry: Co-authored intelligent automated web-hook handler scripts (Powershell) bound to Grafana and compacted alerting layers, dropping production mean time to resolution by 30%.

KEY PROJECTS

Enterprise Edge & Domain Migration to Cloudflare & Automated Edge zone Provisioning Engine

- Orchestic and navigated the massive migration of 2000+ business critical root domains from legacy on-premises F5 nameservers to Cloudflare enterprise utilizing automated pipeline scripts.
- Executed global cutover workflows with absolute zero down-time or business disruption, resulting in a 95% performance speedup in global edge routing and DNS propagation latencies.
- Coded and compiled an automated DNS lifecycle configuration manager by writing custom API integration modules directly inside native infrastructure pipelines.
- Retrieved over 30+ engineering hours per month by transiting configuration work to deterministic, automated validation framework.

Automated IIS Web Server Lifecycle Management System

- Wangled a production-ready Powershell automation module leveraging Web Administration controllers to programmatically provision, modify and teardown IIS websites and application pools.
- Designed idempotent setup and deletion handlers that auto-verify system reliance, bind SSL/TLS host headers and cleanly recycle directory resources, eliminating 95% of legacy manual administration drift on Windows Server instances.

CERTIFICATIONS

- Microsoft Certified: Designing and Implementing Microsoft Devops Solution (AZ-400) - 2025
- Microsoft Certified: Azure Administrator Associate (AZ – 104) – 2024
- Advanced Certification: Windows Server Administrator - 2026

EDUCATION

Vellore Institute of Technology (VIT) – M.S in Software engineering Graduated – 2019, Vellore India

- Thesis: “User Product review Analysis” (Data Mining, Sentimental Analysis and Naïve Bayes text structure)

AWARDS & RECOGNITION

- **Top Performer of the Year** (2024-2025): Awarded by TCS for outstanding systemic cloud infra deliveries and IIS websites Migration.
- **Applause award** (2022, 2026): Received for exceptional handling for Priority incidents and projects.
- **Employee of the month** (5x Recipient): Awarded across 2022-2025 for incident resolution excellence and production stability.
